

Elligo's Data^{AI} Connect

Enabling Rapid, Data-Driven Clinical Research

Only Elligo Health Research® offers a scalable, end-to-end data platform to source, process, analyze, and distribute patient real-world data (RWD).

Three Unique Products, One Convenient Platform

ResearchConnect®

Electronic health records (EHRs) and clinical data storage that integrates EHR, clinical trial, and patient data for analytics, AI, and research.

- Cloud-based and HIPAA-compliant
- Bridges healthcare and research to reduce the provider's administrative burden and provide sponsors access to active patients
- Connects to any medical record or electronic health exchange
- Supports individual patient medical history and population-level analysis
- Creates a research-grade registry of patients for rapid identification and enrollment

RecordsConnect

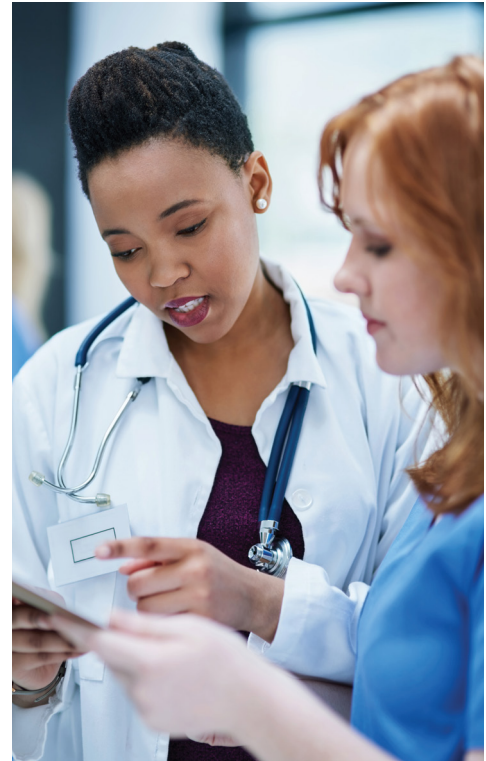

Complete medical records retrieval and analytics solution that transforms data into searchable, actionable insights and individual patient journey information.

- Powered by data tokenization and AI
- Produces structured data from unstructured medical records
- Confirms eligibility prior to enrollment through records retrieval
- Retrieves records after enrollment to monitor for changes
- Monitors records over long periods of time to check for variable changes

ProtocolConnect

Data-driven protocol development service to test designs in the real world.

- Leverages RWD from 150M+ patients
- Models protocols in real healthcare settings
- Enables the design of protocols that work in real-world healthcare
- Creates rapid on-ramp from final protocol to enrolled patients

Optimize the Intersection of Healthcare and Research. Accelerate Your Clinical Trial.

About Elligo Health Research®

Elligo Health Research accelerates clinical trials through healthcare with access to over 150 million known patients and their HIPAA-compliant healthcare data, our IntElligo® Research Stack technology, and our PatientSelect® identification and engagement model. Coupled with the largest Known Patient Access Network, Elligo's Site Solutions enable healthcare practices and research sites to participate in clinical trials. By adaptive engagement of known patients and physicians, we accelerate the development of new pharmaceutical, biotechnology, and medical device and diagnostic products.
